#### **MEETING OF THE**

BOARD OF DIRECTORS OF THE MUNICIPAL WATER DISTRICT OF ORANGE COUNTY

Jointly with the

#### **PLANNING & OPERATIONS COMMITTEE**

April 6, 2015, 8:30 a.m.
MWDOC Conference Room 101

**P&O Committee:**Director Osborne, Chair
Director Barbre
Director Hinman

Staff: R. Hunter, K. Seckel, R. Bell, H. De La Torre, K. Davanaugh, J. Berg

Ex Officio Member: L. Dick

MWDOC Committee meetings are noticed and held as joint meetings of the Committee and the entire Board of Directors and all members of the Board of Directors may attend and participate in the discussion. Each Committee has designated Committee members, and other members of the Board are designated alternate committee members. If less than a quorum of the full Board is in attendance, the Board meeting will be adjourned for lack of a quorum and the meeting will proceed as a meeting of the Committee with those Committee members and alternate members in attendance acting as the Committee.

**PUBLIC COMMENTS -** Public comments on agenda items and items under the jurisdiction of the Committee should be made at this time.

**ITEMS RECEIVED TOO LATE TO BE AGENDIZED -** Determine there is a need to take immediate action on item(s) and that the need for action came to the attention of the District subsequent to the posting of the Agenda. (Requires a unanimous vote of the Committee)

#### ITEMS DISTRIBUTED TO THE BOARD LESS THAN 72 HOURS PRIOR TO MEETING --

Pursuant to Government Code section 54957.5, non-exempt public records that relate to open session agenda items and are distributed to a majority of the Board less than seventy-two (72) hours prior to the meeting will be available for public inspection in the lobby of the District's business office located at 18700 Ward Street, Fountain Valley, California 92708, during regular business hours. When practical, these public records will also be made available on the District's Internet Web site, accessible at <a href="http://www.mwdoc.com">http://www.mwdoc.com</a>.

#### **BOARD ACTION ITEM**

(The MWDOC Board will convene as a full Board and may take action as a Board on the following item)

 SB 355 (LARA) – SAN GABRIEL AND LOWER LOS ANGELES RIVERS AND MOUNTAINS CONSERVANCY

Recommendation: Staff recommends the Board of Directors vote to oppose SB 355 (Lara) unless amended and send a letter to the author and the Senate Natural Resources and Water Committee indicating our opposition.

Adjourn full Board; reconvene as Committee

#### **ACTION ITEMS**

2. DECLARE A REGIONAL WATER SHORTAGE IN THE MWDOC SERVICE AREA AND ADOPT A RESOLUTION IMPLEMENTING MWDOC'S WATER SUPPLY ALLOCATION PLAN

#### **DISCUSSION ITEMS**

TURF REBATE PROGRAM PROCESS AND QUALITY CONTROL EVALUATION

**INFORMATION ITEMS** (The following items are for informational purposes only – background information is included in the packet. Discussion is not necessary unless a Director requests.)

- 4. STATUS REPORTS
  - a. Ongoing MWDOC Reliability and Engineering/Planning Projects
  - b. WEROC
  - c. Water Use Efficiency Projects
  - d. Water Use Efficiency Programs Savings and Implementation Report
- 5. REVIEW OF ISSUES RELATED TO CONSTRUCTION PROGRAMS, WATER USE EFFICIENCY, FACILITY AND EQUIPMENT MAINTENANCE, WATER STORAGE, WATER QUALITY, CONJUNCTIVE USE PROGRAMS, EDUCATION, DISTRICT FACILITIES, and MEMBER-AGENCY RELATIONS

#### **ADJOURNMENT**

**NOTE:**At the discretion of the Committee, all items appearing on this agenda, whether or not expressly listed for action, may be deliberated, and may be subject to action by the Committee. On those items designated for Board action, the Committee reviews the items and makes a recommendation for final action to the full Board of Directors; final action will be taken by the Board of Directors. Agendas for Committee and Board meetings may be obtained from the District Secretary. Members of the public are advised that the Board consideration process includes consideration of each agenda item by one or more Committees indicated on the Board Action Sheet. Attendance at Committee meetings and the Board meeting considering an item consequently is advised.

Accommodations for the Disabled. Any person may make a request for a disability-related modification or accommodation needed for that person to be able to participate in the public meeting by telephoning Maribeth Goldsby, District Secretary, at (714) 963-3058, or writing to Municipal Water District of Orange County at P.O. Box 20895, Fountain Valley, CA 92728. Requests must specify the nature of the disability and the type of accommodation requested. A telephone number or other contact information should be included so that District staff may discuss appropriate arrangements. Persons requesting a disability-related accommodation should make the request with adequate time before the meeting for the District to provide the requested accommodation.

#### **BOARD ACTION ITEM**

April 6, 2015

**TO:** Board of Directors

FROM: Planning and Operations Committee

(Directors Osborne, Barbre, Hinman)

Robert Hunter Staff Contact: Heather Baez

General Manager

SUBJECT: SB 355 (Lara) – San Gabriel and Lower Los Angeles Rivers and

**Mountains Conservancy** 

#### STAFF RECOMMENDATION

Staff recommends the Board of Directors vote to oppose SB 355 (Lara) unless amended and send a letter to the author and the Senate Natural Resources and Water Committee indicating our opposition.

#### **COMMITTEE RECOMMENDATION**

Committee recommends (To be determined at Committee Meeting)

#### **SUMMARY**

Senate Bill 355 (Lara-D, Bell Gardens) would change the membership of the San Gabriel and Lower Los Angeles Rivers and Mountains Conservancy (RMC) Board by changing the selection criteria for one of the existing voting members and adding two non-voting members. Portions of the Orange County tributary to the Los Angeles Watershed account for approximately 20% of the watershed area, yet this legislation proposes to reduce Orange County's representation on the Board from roughly 15% to less than 10%.

Specifically, this bill would: increase the *non-voting* number of members from 7 to 9, and retain the existing number of 13 *voting* members. The two additional non-voting members would be a member of the Senate and a member of the Assembly, appointed by the Senate Committee on Rules and the Speaker, respectively. It would remove one of the two voting

Budgeted a	Budgeted amount:		Choice
Fiscal Impact (explain if unbudgeted			

members selected from the Orange County Division of the League of California Cities (the one selected by a majority of the membership of the city selection committee of Orange County) and replace him/her with a resident of a city bordering the Lower Los Angeles River appointed by the Senate Committee on Rules.

#### **ARGUMENTS IN SUPPORT**

According to the author's office:

"The recently approved state water bond provides millions of dollars in funding opportunities for the revitalization of the Lower Los Angeles River watershed, including parks and open space along the river. Many of those funds, including a \$30m direct allocation for watershed improvements, and a share of \$100m for urban creek restoration, will be allocated through the RMC. Opportunities for improvements to the Lower LA River directly impact the communities that border the river. It is vital that the conservancy board include representation from the cities that border the river, to provide a local perspective on plans and developments."

"Adding state elected officials as non-voting board members in an advisory capacity has proven successful at other state conservancies. The Sacramento-San Joaquin Delta Conservancy includes two non-voting members - a Senator and an Assembly Member representing districts that include a portion of the Delta. The Santa Monica Mountains Conservancy includes three Senators and three Assembly Members, appointed by the Senate Rules Committee and the Speaker of the Assembly."

The author makes no mention of how removing a voting member from Orange County is a benefit to the RMC or why this is needed/necessary.

#### **ARGUMENTS IN OPPOSITION**

There is no benefit to eliminating an Orange County representative of the RMC, and replacing them with a resident of a city bordering the Lower Los Angeles River, other than a blatant power grab of this conservancy board by those looking to steer Proposition 1 bond funds toward Los Angeles and other specified projects in that region.

There are \$30 million in Prop 1 funds for watershed improvement allocated to the RMC, presumably for the benefit of the *entire* conservancy and both the LA River and San Gabriel River watersheds. A portion of \$100 million for creek restoration has also been allocated to the conservancy to split with the Santa Monica Mountains Conservancy. By removing a voting member from Orange County, the author and the conservancy intend to ensure that ALL of the available funds go to the Los Angeles region which surely was not the intent of the ballot measure. Prop 1 was crafted specifically without earmarks and conservancy funds were allocated in a fair manner. This legislation attempts to alter the bi-partisan efforts that were made when negotiating the elements of Prop 1 after the fact.

Further reducing Orange County's relevance on the RMC, the author has also increased the non-voting membership of the board, by installing one member of the Senate, appointed by the Senate Rules Committee, and one member of the Assembly, appointed by the Speaker of the Assembly. While these are non-voting memberships, the only explanation of the

intent of this bill is to make sure that all future bond funds flow to the Los Angeles portion of the RMC's territory, and not Orange County.

If the RMC feels that they need more representation from the Lower Los Angeles River cities, it should not be at the expense of Orange County. Adding an additional member to the RMC would not affect Orange County's relevance on the Board nearly as much as removing a member. For this reason, staff recommends an oppose unless amended position – requesting the author delete the section that would remove one of the voting members selected from the Orange County Division of the League of California Cities.

#### **DETAILED REPORT**

The (current) composition of the board of the RMC is specified by California Public Resources Code, Section 32605. The following list contains pertinent portions of the appointment criteria from Section 32605, the board members, and their designees. Board members who are unable to attend a meeting can designate substitutes (designees) who may attend and vote in their place.

The board shall consist of 13 voting members and seven nonvoting members, as follows:

a) The 13 voting members of the board shall consist of all of the following:

One member of the Board of Supervisors of the County of Los Angeles Hilda Solis

Designee: Teresa Villegas

Two members of the board of directors of the San Gabriel Valley Council of Governments

Margaret Clark

Denis Bertone

Two members of the board of directors of the Gateway Cities Council of Governments
Patrick O'Donnell
Edward Wilson

Two members of the Orange County Division of the League of California Cities
Troy Edgar
Vacant

One member shall be a representative of the San Gabriel Valley Water Association Claudine Meeker

One member shall be a representative of the Central Basin Water Association Daniel Arrighi, Elected Vice-Chair

One member shall be a resident of Los Angeles County appointed by the governor from a list of potential members submitted by local, state, and national environmental organizations....

Frank Colonna, Elected Chair

The Secretary of the Resources Agency

John Laird

Designee: Bryan Cash

The Secretary for Environmental Protection

Matthew Rodriguez

Designee: Jonathan Bishop

The Director of Finance

Michael Cohen

Designee: Eraina Ortega Designee: Karen Finn

(b) The seven ex officio, nonvoting members shall consist of the following officers or an employee of each agency designated annually by that officer to represent the office or agency:

The District Engineer of the United States Army Corps of Engineers.

Colonel Kimberly M. Colloton, District Engineer, Los Angeles Region

Designee: Daniel Sulzer, Assistant Chief

Designee: Alexander Watt

The Regional Forester for the Pacific Southwest Region of the United States Forest Service

Randy Moore, Regional Forester for the Pacific Southwest Region

Designee: Tom Contreras, Forest Supervisor

The Director of the Los Angeles County Department of Public Works

Gail Farber, Director
Designee: Terri Grant

Designee: Armond Ghazarian

The Director of the Orange County Public Works Department

Shane Silsby, Director

Designee: Mary Ann Skorpanich

Designee: Marilyn Thoms Designee: Rick LeFeuvre

A member of the San Gabriel River Watermaster

Stephen Johnson

Designee: Stan Chen

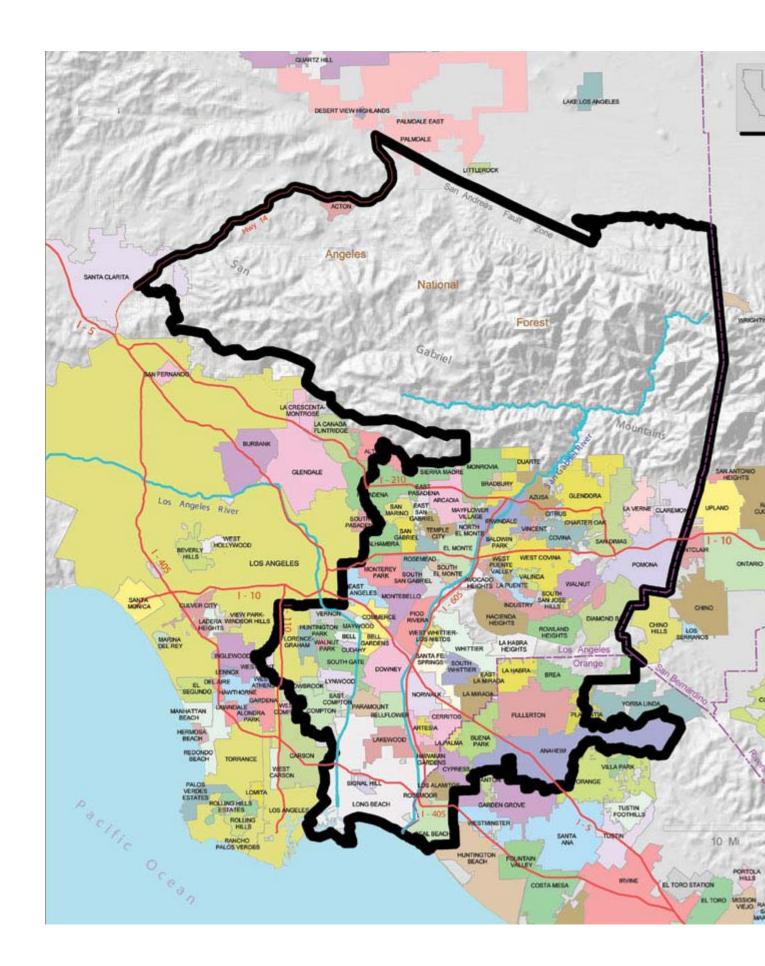

The Director of Parks and Recreation Lisa Mangat, Acting Director Designee Sean Woods

The Executive Director of the Wildlife Conservation Board

John Donnelly

Designee: Dave Means

The map shows the political geography of the greater Los Angeles area: Los Angeles and Orange counties, the cities, and the RMC's territory -- indicated by the black border. There are sixty eight cities (including slivers of the cities of Los Angeles and South Pasadena) in the RMC.

# SENATOR RICARDO LARA

#### LEGISLATIVE FACT SHEET

## SB 355 (Rivers and Mountains Conservancy Board)

\*\*\*\*\*\*\*\*\*\*

#### **Summary:**

SB 355 makes changes to the composition of the San Gabriel and Lower Los Angeles Rivers and Mountains Conservancy Board to ensure that a local perspective is included in the decision-making process. This bill requires one voting member of the board to be a resident from a city that borders the Lower Los Angeles River. Additionally the bill will include representatives from both the California State Senate and California State Assembly on the board.

#### **Background:**

The San Gabriel and Lower Los Angeles Rivers and Mountains Conservancy (RMC) was created through Statute in 1999. The mission of the RMC is to preserve open space and habitat in order to provide for low-impact recreation and educational uses, wildlife habitat restoration and protection, and watershed improvements within the boundaries of the Conservancy. The territory of the RMC includes the watersheds for the San Gabriel River and the lower Los Angeles River, along with portions of the Santa Clara River and the lower Santa Ana River.

The Board of the RMC is established in statute and includes 13 voting members and 7 non-voting members. The 13 voting members are:

A member of the LA County Board of Supervisors, Two representatives from the San Gabriel Valley Council Of Governments,

Two representatives from the Gateway Cities Council Of Governments,

Two members of the Orange County Division of the League of California Cities,

A representative of the San Gabriel Valley Water Association,

A representative of the Central Basin Water Association, A resident of Los Angeles County,

The Secretary of the Resources Agency,

The Secretary for Environmental Protection,

The Director of Finance.

The non-voting members are representatives from: United States Army Corps of Engineers, United States Forest Service, Los Angeles County Department of Public Works, Orange County Public Works Department, San Gabriel River Watermaster, Department of Parks and Recreation, Wildlife Conservation Board.

#### **Issue:**

The recently approved state water bond provides millions of dollars in funding opportunities for the revitalization of the Lower Los Angeles River watershed, including parks and open space along the river. Many of those funds, including a \$30m direct allocation for watershed improvements, and a share of \$100m for urban creek restoration, will be allocated through the RMC. Opportunities for improvements to the Lower LA River directly impact the communities that border the river. It is vital that the conservancy board include representation from the cities that border the river, to provide a local perspective on plans and developments.

Adding state elected officials as non-voting board members in an advisory capacity has proven successful at other state conservancies. The Sacramento-San Joaquin Delta Conservancy includes two non-voting members - a Senator and an Assembly Member representing districts that include a portion of the Delta. The Santa Monica Mountains Conservancy includes three Senators and three Assembly Members, appointed by the Senate Rules Committee and the Speaker of the Assembly.

#### **Solution:**

SB 355 increases the number of non-voting members on the RMC board to 9, adding a Senator appointed by the Senate Rules Committee and an Assembly Member appointed by the Speaker of the Assembly. The bill also replaces one member of the Orange County Division of the League of California Cities with a resident from a city that borders the Lower Los Angeles River.

#### **Staff Contact:**

Lawrence Cooper, 651-4033

Senator Ricardo Lara State Capitol, Room 5050 Sacramento, CA 95814

RE: SB 355 (Lara) – San Gabriel and Lower Los Angeles Rivers and Mountains

**Conservancy** 

**Notice of OPPOSE UNLESS AMENDED** 

Honorable Senator Lara:

The Orange County Division of the League of California Cities has adopted an *Oppose Unless Amended* position on Senate Bill 355, your legislation regarding the San Gabriel and Lower Los Angeles Rivers and Mountains Conservancy.

Since the creation of the San Gabriel and Lower Los Angeles Rivers and Mountains Conservancy (the Conservancy) in 1999 (*Senate Bill 216 and Assembly Bill 1355*), the County of Orange has been represented on the Conservancy Board of Directors by two seats.

One of the provisions of your bill seeks to remove one of Orange County's seats, thereby eradicating 50% of our representation, and bestow it on the City of Los Angles. The seat proposed for elimination is one that is directly appointed by the City Selection Committee of the County of Orange, which essentially removes a directly appointed local elected official from our membership to the Conservancy Board.

The passage of the Proposition 1 Water Bond was a bipartisan effort and enjoyed strong support from Orange County cities, legislators and voters. Therefore, we are also very concerned about how this proposal would reduce our voice in the allocation of the \$80 million in bond funding to be distributed by the Conservancy.

The Orange County Division is not opposed to the expansion of the Conservancy Board of Directors; receiving more local representation and additional input from the local level would be positive. However, we stand in strong opposition to achieving this objective at the expense of 50% of our County's representation on the Conservancy's Board of Directors.

We therefore adopted an *Oppose Unless Amended* position, and respectfully request that you remove the language eliminating one of Orange County's seats on the Conservancy's Board of Directors.

Sincerely,

Scot Nelson

Councilmember, City of Placentia

President, Orange County Division, League of California Cities

Page 10 of 76

CC: Orange County Senators, Senate Natural Resources and Water Committee Members

# **ACTION ITEM**

April 15, 2015

**TO:** Board of Directors

FROM: Planning & Operations Committee

(Directors Osborne, Barbre, Hinman)

Robert Hunter Staff Contact: Harvey De La Torre

General Manager

SUBJECT: DECLARE A REGIONAL WATER SHORTAGE IN THE MWDOC SERVICE

AREA AND ADOPT A RESOLUTION IMPLEMENTING MWDOC'S WATER

**SUPPLY ALLOCATION PLAN** 

#### STAFF RECOMMENDATION

Staff recommends the MWDOC Board of Directors take the following actions, *once Metropolitan declares a regional water shortage and set a regional shortage level at their April 14, 2015 Board meeting*:

- Declare that there is a regional water shortage in the Municipal Water District of Orange County service area
- Adopt a resolution implementing Municipal Water District of Orange County's Water Supply Allocation Plan, effective July 1, 2015 and ending June 30, 2016 (The Resolution will be available at the MWDOC Board meeting on April 15, 2015)
- 3. Authorize the General Manager to implement the Municipal Water District of Orange County's Water Supply Allocation Plan at the Regional Shortage level *X* (set by the Metropolitan Board on April 14, 2015)

#### COMMITTEE RECOMMENDATION

Committee recommends (To be determined at Committee Meeting)

#### **REPORT**

As of March 31, 2015, the state's precipitation and snowpack remain below normal for the year. The precipitation in northern California for the month of March provided only 0.8

Budgeted (Y/N): N	Budgeted amount: None		Core _X_	Choice
Action item amount: n/a	Line item:			
Fiscal Impact (explain if unbudgeted):				

inches (six inches lower compared to normal) and the snowpack in the northern Sierra reported only 7 percent of normal. Based on these conditions, DWR is forced to keep the SWP "Table A" Allocation at 20 percent.

Based upon Metropolitan (MET) staff analysis, the final SWP "Table A" Allocation, which is usually announced in early summer, could slightly increase but unfortunately there is a low probability that such an increase would be enough to fully offset water demands and halt further draws on MET's storage. As of today, MET has close to 1.2 million acre-feet of dry-year storage; however, only half is available to be used this fiscal year.

As a result of these conditions, MET staff will be recommending to its Board the implementation of its Water Supply Allocation Plan in April, in order to reduce imported demands and stretch dry-year storage supplies for the coming year. What is not yet determined is what regional shortage level MET staff plans to recommend. Discussion for the past month has ranged from a Regional Shortage Level 2 to 4. At these shortage levels, imported water deliveries can be reduced by as much as 10% to 20% subject to an agency's dependence on MET water.

In preparation for MET declaring and implementing its Water Supply Allocation Plan in fiscal year 2015-16, MWDOC, in collaboration with our member agencies and Board, reviewed and updated its own Water Supply Allocation Plan earlier this year.

MWDOC staff held a number of workshops with the member agency managers and have kept them up to date on the likelihood of allocations being implemented this year. Therefore, if the MET Board implements its allocation plan for fiscal year 2015-16, it is MWDOC staff's recommendation that the MWDOC Board, at its April 15, 2015 Board meeting: (1) Declare a regional water shortage in its service area; (2) Adopt a resolution calling for the implementation of MWDOC's Water Supply Allocation Plan; and (3) Authorize the General Manager to implement to its 28 client agencies in Orange County the Plan at the Regional Shortage Level declared by the MET Board.

#### **DISCUSSION ITEM**

April 6, 2015

TO: Planning & Operations Committee

(Directors Osborne, Barbre, Hinman)

FROM: Robert Hunter, General Manager

Staff Contact: J. Berg, Water Use Efficiency Programs Manager

SUBJECT: TURF REBATE PROGRAM PROCESS AND QUALITY CONTROL

**EVALUATION** 

#### STAFF RECOMMENDATION

Staff recommends the Planning & Operations Committee review and discuss the Turf Removal Rebate Program Quality Control and Process Evaluation.

#### **COMMITTEE RECOMMENDATION**

Committee recommends (To be determined at Committee Meeting)

#### SUMMARY

In 2010 the Board authorized staff to begin implementation of a Turf Removal Rebate Program (TRRP) on behalf of our member agencies utilizing funding provided by the Metropolitan Water District of Southern California. This program has been administered using MWDOC and member agency staff; MWDOC staff processes rebate applications and member agency staff conduct mandatory pre- and post-retrofit area measurements and eligibility inspections.

From 2010 through 2013 MWDOC received between 10 and 50 TRRP applications per month. Beginning in January 2014, the TRRP experienced unprecedented growth due to the Governor's Drought Declaration, the State Water Resources Control Board Emergency Regulation and an increase in our rebate to \$2 per square foot. By October, we received over 500 applications per month, a more than an 18 fold increase in monthly applications.

To address this program growth, staff gained Board authorization in November to hire a part-time temporary staff person to assist with TRRP and began a process to conduct an independent Turf Removal Rebate Program Quality Control and Process Evaluation. The purpose of this discussion item is to share the results of the independent evaluation with the

Budgeted (Y/N): N/A	Budgeted amount: N/A		Core	Choice <u>X</u>
Action item amount: N?A		Line item: N/A		
Fiscal Impact (explain if unbudgeted): This item is only for discussion.				

Board and to inform the Board of staff's intentions to implement recommendations contained in the independent evaluation.

#### **DETAILED REPORT**

To address the unprecedented growth in the Turf Removal Rebate Program (TRRP), staff began a process to conduct an independent Turf Removal Rebate Program Quality Control and Process Evaluation (Evaluation). The Evaluation was designed to 1) evaluate program quality control measures to protect against fraud and ensure public funds are spent appropriately, and 2) to identify opportunities to process the increased volume of rebates in a more timely manner.

Staff released a Request for Proposals in October 2014 to conduct a Turf Removal Rebate Program Quality Control and Process Evaluation. The RFP was distributed to five consultants known to have experience with rebate programs. Responses were received from two consultants. Maureen Erbeznik & Associates was selected due to her superior experience developing, implementing and evaluating rebate programs for water and energy utilities in the private and public sectors. Additionally, this consultant's understanding of MWDOC's needs and cost proposal were more competitive than the other proposal. In November 2014, the General Manager executed a contract not to exceed \$5,000 with Maureen Erbeznik & Associates to perform the Evaluation.

The evaluation was conducted between December 2014 and March 2015. While the Evaluation took longer than anticipated, it was completed on budget. A copy of the Evaluation report is provided as Attachment A. The Evaluation concluded the following:

# **Conclusion**

MWDOC's Turf Removal Rebate Program has realized high achievement on many fronts. Management has created a program with unparalleled quality standards and staff has stepped up to the task of providing meticulous oversight.

With the recent surge in program response, however, the processes and software systems are now taxed to the limit of their capabilities. While there are steps to be taken in the short run to alleviate some process burdens, the optimal solution for the longer term is to buy or build a rebate management system with the modules and capabilities that best meet today's Program volume and customer service demands.

Existing available software systems can be modified to meet the needs of the Program; an analysis of the various available packages can identify the ones that best match the functionality and quality required for MWDOC. Another option is for MWDOC to build a custom software system for the Program or, possibly, for all of MWDOC's rebate programs. There are several quality software programming firms that have specific industry rebate experience.

By implementation of the report recommendations, MWDOC would see significant procedural improvements in consistency, efficiency, customer satisfaction, and application turn-around time. A single data basing and processing system would eliminate a great number of manual and redundant procedures that currently take place. This would potentially allow MWDOC to reduce the personnel required to manage the Program, freeing staff up to provide even higher levels of customer service and to further support department

programs. Member agencies will also benefit from the efficiencies of online processing, automatic notifications, and reporting available through the portal.

A state-of-the art software system would also allow for the following:

- A heightened level of customer interaction and satisfaction. Through a customer
  portal design, customers can have the resources to track their application status and
  view any number of educational videos. This should result in a higher level of
  customer satisfaction.
- A sophisticated financial tracking system. This would allow MWDOC's program
  management staff to accurately know at any of the rebate steps along the way
  where any financial constraints exist.
- Participant tracking. The system would have the ability to know where a participant is
  within the various steps. It would be able to provide aging reports to MWDOC staff
  and emails to participants to encourage their continued progression with their
  individual projects.
- Reporting. Multiple reports/data tables from any point in the application/rebate process could be generated for review by MWDOC or its participating member agencies.
- Program integration. MWDOC's additional in-house rebate programs could be integrated into the rebate processing system.
- Member agency efficiencies. Member agencies would benefit from efficiencies in the pre- and post-inspection process including: automatic notifications, portal data entry, portal documentation upload, and in-field data entry capability.

#### **Next Steps:**

With a clear independent evaluation of the TRRP staff is in the process of doing the following:

- Composing a Request for Proposals to procure a web-based rebate processing platform to replace our existing process
- Budgeting funds in FY 2015-16 in anticipation of the new rebate processing platform
- Return to the board to request authorization to purchase the selected platform by the June Board meeting

# INDEPENDENT PROCESS AND QUALITY CONTROL EVALUATION of MWDOC's TURF REMOVAL REBATE PROGRAM

# **Table of Contents**

Executive Summary	3
Section 1: Background	7
Section 2: Turf Removal Rebate Process	11
Section 3: Findings and Recommendations	20
Conclusion	33

# **Executive Summary**

The Municipal Water District of Orange County (MWDOC) Turf Removal Rebate Program ("TRRP" or the "Program") has operated since 2010 with the highest levels of controls and accountability. The Program was created as a result of the Metropolitan Water District's Member Agency Program Advisory Committee's evaluation on the efficacy of such a program in Southern California. Operating first as a pilot, the Program aimed at increasing water use efficiency by incentivizing MWDOC customers to replace water-intensive turfgrass with California native/friendly plants.

Up until mid- 2014, program volumes were relatively low and the heavy dependence on manual systems and multiple software packages to process rebate applications was manageable and productive. In 2014, the Governor declared a drought, the State Water Resources Control Board adopted an Emergency Drought Regulation, and program funding increased. This spurred greater participation as the customer rebate per square foot of turfgrass removed increased from \$1.00 to \$2.00.

Since the early years, program volume has grown by almost 4000%, with over 500 applications received in October 2014. In addition, further increases in customer demand and agency interest are anticipated as the program continues to gain popularity throughout the region.

The dramatic increase in response has exposed process inefficiencies and pushed the limits of program staff, software management, and reporting. Under the stress of high volume and the limitations of multiple software systems, the process has become increasingly labor-intensive and the turnaround times protracted.

It is important to recognize that there have been a few automation advancements implemented recently, yielding some improvement to turnaround times. This is a step in the right direction, and it is recommended that a number of additional steps be taken by MWDOC to upgrade program procedures and services under the TRRP.

#### **Existing Program Process**

The current Program process involves input from several parties in order to reach completion. Customers initiate the process by submitting a TRRP on-line or paper application, which triggers procedural steps involving various MWDOC departments, including Water Use Efficiency (WUE) staff, the mailing department, accounting staff, the finance department, MWDOC member agency staff, field inspection vendors, and the MWDOC Administration and Finance Committee.

Administration of the TRPP is carried out by in-house staff, which processes and evaluates rebate applications, distributes pre- and post-inspection work orders, maintains website and other program materials, databases participation data, fields both phone and email inquiries, reviews submitted project receipts to determine overall project costs, and processes rebate checks. A combination of

staff from member agencies and the regional inspection vendor assists by performing on-site preand post-retrofit inspections and turf area measurements.

The current system, which has been in place since the inception of the pilot phase of the Program, includes both paper and online rebate application options for the customer and a rebate-processing system consisting of three separate <u>non-interacting</u> (disconnected) Access databases: Canceled, Open, and Completed.

With the rapid program growth, managing input from several MWDOC departments, member agencies, and customers increases the difficulty in maintaining the Program's rebate processing efficiency. Several opportunities exist for procedural improvements in consistency, efficiency, and application turn-around time.

#### **Operational and Fiscal Oversight**

Despite extreme program growth and limitations due to "disconnected" software and database systems, it is important to note that the quality of rebate administration and fiscal oversight is exceptionally high.

Financial practices are very thorough, with high levels of quality control and rebate process monitoring.

Practices such as 100 percent pre- and post-installation inspections nearly eliminate any possibility of customer fraud. In addition, an application has multiple "eyes" on it along the way, with MWDOC staff scrutinizing the application at several steps throughout the rebate program process. These levels of review go far beyond the average water utility rebate program.

#### <u>Issues</u>

The Program's success and the increased customer participation have highlighted weaknesses in the application processes. This resulted in an application backlog, reflected in the elapsed time between receipt of an application and the pre-inspection of the property involved (refer to Table 3). Key inefficiencies include the lack of automation, the lack of a central database, and instances where duplicative efforts are required.

A lack of automation translates to repetitive tasks that must be manually completed by program staff members. Improving this aspect of the process would improve efficiency by increasing speed and reallocating staff time to other tasks. The lack of a central database creates barriers to quickly verifying information, analytics, and report generation. In addition, separate non-interacting databases are prone to errors, as changes must be tracked manually. Duplicative efforts are the result of both a lack of automation, as well as a lack of a centralized portal containing the complete set of data.

#### Recommendations

There remain several opportunities for procedural improvements in efficiency, customer service, and application turn-around time. This evaluation proposes both short- and long-term recommendations as follows:

#### **Short Term Upgrades to Existing Process**

In the near future, it is recommended that some basic changes be made to the current system. The following recommended upgrades would reduce some instances of double data entry activities:

- 1. Create a query from the Program database in order to generate the Approval Report and accounting summaries.
- 2. Change current purchase order (PO) format and consolidate each funding line item into one. Currently each application is an individual line item. *Note: since the writing of this report, the upgrade has been implemented.*

#### **Long Term Upgrades**

It is recommended that MWDOC purchase or custom-develop a rebate management software system. The overall goal is to increase automation and create a centralized database that encompasses all elements of the process. Customizable software systems and technologies that match MWDOC's needs are commonly available in the market today.

The new system would streamline all processes, decrease processing time, and reduce staff labor time and costs. Both customer and staff-side processes would be improved through clearer messaging of the application progress and a reduction of manual input. Today's state-of-the-art systems also provide dramatically increased customer usability, as well as easy report and data access for member agencies and program administrators.

The desired outcome is a Program process that: (1) addresses the key inefficiencies in the existing process, and (2) will be capable of handling continued Program expansion.

In adopting or developing such a process, MWDOC should consider incorporation of other rebate programs, such as drip irrigation and landscape irrigation retrofits, into the new software system. This would create efficiencies beyond just the TRRP and could encompass all of MWDOC's conservation programs and initiatives.

#### Results of Implementing a Rebate Processing Software Upgrade

- Single portal design with easy access by all users
- Automated processes with built-in reliable accuracy
- Staff resource savings
- Member agency and field vendor resource savings

- Customer timeline reductions
- Customer ease of use
- Enhanced financial and customer tracking

#### **Report Outline**

This report is structured as follows:

**Section 1** presents a brief history and background of MWDOC's TRRP, as well as summary level data for the Program.

**Section 2** documents the processes and procedures utilized for Program implementation.

**Section 3** discusses the findings and provides recommendations to maintain and/or improve the performance of the Program.

# **Section 1: Background**

Turfgrass requires more water than any other ornamental plant in urban landscaping, a minimum of four feet of irrigation per year in Orange County. By contrast, California native/friendly plants require less than half of turfgrass irrigation requirements. Thus, voluntary replacement of non-functional turf with other types of landscape is viewed as a viable means of significantly reducing urban water use.

In late 2008, Metropolitan Water District's Member Agency Program Advisory Committee (PAC) evaluated the efficacy of a turf removal program for Southern California, including Orange County. This evaluation included a review of similar programs in other areas, including those of Southern Nevada Water Authority and North Marin Water District. The evaluation concluded that savings of 44 gallons per square foot per year of turf removed are possible.

Based upon the findings of the PAC, MWDOC staff conceived and implemented a pilot version of the Program in 2010. This incentive-based program complemented MWDOC's existing Smart Timer and Sprinkler Nozzle Rebate Programs. In late 2010, staff estimated the pilot TRRP would result in 10 rebate checks per month for about six months. The volume estimate was based upon an anticipated customer response to a \$1.00 per square foot incentive. Administration of the pilot TRRP was performed entirely in-house; MWDOC staff received and processed applications, performed site inspections, and generated rebate checks. Both residential and commercial properties were eligible and participated. Some member agencies augmented the rebates with their own funds ranging from an additional \$0.50 to \$1.00 per square foot.

By 2012, additional TRRP funding, coupled with increased participation by member agencies, yielded increased customer interest. As a result, applications jumped to an average of 22 per month. The program continued to be administered by MWDOC staff, with the aid of member agencies and a regional vendor performing site inspections.

In early 2014, applications increased to 40 per month. By the end of 2014, with the increase of Metropolitan's funding for turf removal to \$2.00 per square foot and the statewide drought's unprecedented publicity, the application rate for turf removal projects increased dramatically to approximately 400 per month. This significant increase of applications burdened staff, increased response time to customers, and created an extensive backlog of pre- and post-inspections. Figure 1 on the following pages displays the number of applications received per month and the respective rebate level from the inception of the MWDOC TRRP.

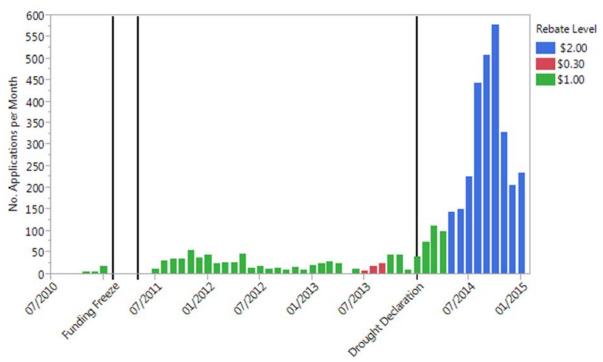

Figure 1. Number of applications received per month from the inception of the MWDOC TRRP. The rebate level is identified by color.

At the inception of this evaluation in November 2014, MWDOC provided three Excel databases of Program activity, comprising: (1) Open (in-progress) application work orders, (2) Completed turf removal projects for which rebates had been provided, and (3) Cancelled applications. These three databases covered the period from November 2010 through November 2014.

The database of open work orders contained 1,881 project applications in various stages of the TRRP process. The 1,881 line items were distributed as follows:

Table 1. Open TRRP work orders (projects at the pre and post inspection stage)

	Total open work orders	Open work orders completed through <u>pre-improvement</u> evaluation	Completed through post-improvement work order sent	Completed through <u>post-</u> <u>improvement</u> inspection
Residential	1,717	1,348	568	54
Commercial	164	117	13	1
Total	1,881	1,465	581	55

Table 2 summarizes the contents of all three databases. A total of 3,352 applications have been submitted with 1,063 completed, 1,881 open, and 408 canceled. Cancelled project applications represented 12.2 percent of all applications received over the life of the Program.

Table 2. TRRP Project Status (as of December 1, 2014)

	Open work orders	Completed projects	Cancelled project applications	TOTAL
Residential	1,717	933	357	3,007
Commercial	164	130	51	345
Total	1,881	1,063	408	3,352

Figure 2 shows the number of applications received per month from January 2014 to January 2015 by application current status. Again, we can see that sharp rise in the number of applications. This figure illustrates the progression of the project. It can be observed that the site status must be overseen during a substantial period of time.

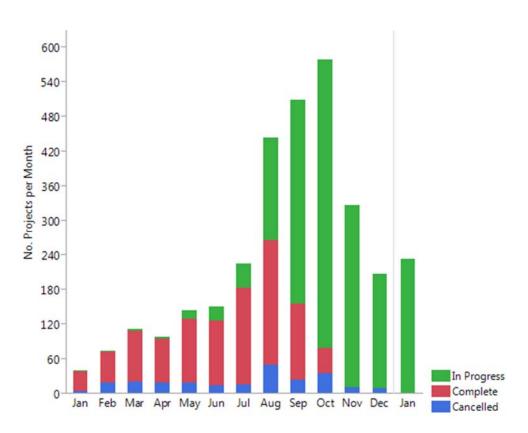

Figure 2. Number of projects per month from January 2014 – January 2015. The project's current status is identified by color.

The duration of the various steps in the TRRP process can be determined from the milestones in the three databases identified above. Table 3 illustrates the average elapsed time (in calendar days) necessary to complete and transition the key steps. For the average completed project, the total elapsed time fromapplication receipt to issuance of a rebate check was 125.6 days for residential projects and 179.8 days for commercial projects.

Table 3. Process Time (average elapsed calendar days to complete process steps)

	Open I	Projects	Complete	ed Projects	Cancelled	Projects
	Resid (days)	Comm'l (days)	Resid (days)	Comm'l (days)	Resid (days)	Comm'l (days)
Customer application to pre- improvement evaluation/work-order	16.7		16.5	27.2	19.7	70.8
Pre-improvement evaluation/work order to pre-improvement inspection	0.4	22.8				
Customer completion of project and notification of MWDOC	55.0	Insufficient data	68.4	112.2		
Post improvement inspection to rebate check	Not Applicable		40.7	40.4	Not Ap	plicable
Total elapsed calendar days	Not Ap	pplicable	125.6	179.8		

### **Section 2: Turf Removal Rebate Process**

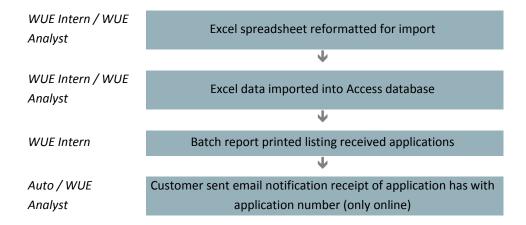

The MWDOC Turf Removal Rebate Process, as it currently exists, is depicted in the following charts. The process flow is broken down into 12 distinct steps starting with the Customer Application Submittal and ending with MWD and Member Agency Invoicing. The twelve steps are as follows:

- Step 1: The On-line or Paper Application Submittal Process
- Step 2: The Application Review Process
- Step 3: The Pre-Installation Inspection Work Order Generation and Distribution Process
- Step 4: The Pre-Installation Inspection Process
- Step 5: The Notice to Proceed to Customer Process
- Step 6: The Participant Turf Removal Process
- Step 7: The Post-Work Order Generation and Distribution Process
- Step 8: The Post-Installation Inspection Process
- Step 9: Application Approval Process
- Step 10: Board Approval Process
- Step 11: The Rebate Check Run Process
- Step 12: Metropolitan Water District and Member Agency Invoicing Process

Recommendations for improvements and/or automation advancements follow each individual section of the process.

**Step 1: The On-line/Paper Application Submittal Process:** 

Responsible Party	Application Submittal
Applicant	Applicant submits application online or hard copy
	₩
WUE Intern	Online data imported from Survey Gizmo to Excel
	₩
WUE Intern	Excel data checked for matching water agency
	₩
Mail Dont	Hard copy applications and attachments scanned by Admin to
Mail Dept.	laserfische and forwarded to WUE
	<b>V</b>
WUE Intern	Hard copy application data entered into Excel
	<b>V</b>

#### **Application Submittal Recommendations**

Due to software limitations, staff is currently performing a number of manual procedures and data transfers in order to advance the customer application. The Application Submittal Process needs to be restructured and fully automated. Specific recommendations are detailed in Section 3 of the document.

**Step 2: The On-Line Application Review Process:** 

Responsible Party	Application Review
Auto	Email of application and attachment received into Turf Removal program email
WUE Intern	Each application PDF is separated and saved into appropriate file. PDF includes water bill, photos, and site plans
WUE Intern / WUE Analyst	Application fields reviewed, water bill checked for eligible agency, photos & site plan viewed to verify condition of turf & other eligibility
WUE Intern / WUE Analyst	Application processed or canceled
WUE Analyst	If canceled application and email/letter sent with reason for cancelation

All application data and documents should be stored and viewable within a single online system. The new system should allow staff to process applications and generate emails and letters automatically as a standard function of the system. Specific recommendations are detailed in Section 3 of the document.

**Step 3: The Pre-Installation Inspection Work Order Generation Process:** 

Responsible Party	Pre-Installation Inspection Work Order Generation and Distribution
Auto	Pre-work orders created in Access database
WUE Intern / WUE Analyst	Pre-work order email with attachments sent to MRCD or appropriate water agency for onsite inspection

#### **Pre-Installation Work Order Generation and Distribution Recommendations**

It is recommended that the Pre-installation Work Order and Distribution process be redesigned to include increased automation as well as allow regional inspection vendor, member agency, and accounting staff to have system access via portals, as deemed appropriate. Specific recommendations are detailed in Section 3 of the document.

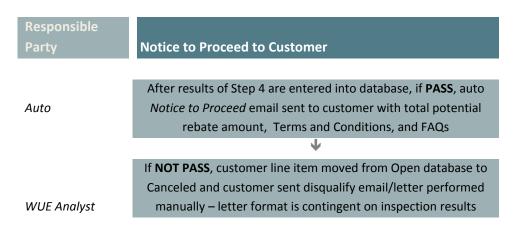

**Step 4: The Pre-Installation Inspection Process:** 

Responsible	
Party	Pre-Installation Inspection
Inspection Vendor	Regional inspection vendor or member agency conducts pre-
•	inspection including: measuring square footage, taking pictures of
or Water Agency	turf areas to be removed and completing pre-work order
	₩
Inspection Vendor	Regional vendor or water agency sends email to MWDOC with
or Water Agency	completed inspection pre-work orders and pictures
	₩
WUE Analyst	Pre-work order and pictures saved to appropriate file
	₩
WUE Intern / WUE Analyst	Pre-work order results entered into Program database using form
	<b>V</b>
	If not pass, customer information provided to WUE Analyst for
WUE Intern	customer notification

#### **Pre-Installation Inspection Recommendations**

This step in the process should be automated to allow the member agency or field inspector the ability to upload all required inspection information, with automatic notification to the program administrator. Specific recommendations are detailed in Section 3 of the document.

**Step 5: The Notice to Proceed to Customer Process:** 

#### **Notice to Proceed Recommendations**

A number of system automations are recommended to streamline the Notice to Proceed Process and communications to the customer. Specific recommendations are detailed in Section 3 of the document.

**Step 6: The Turf Removal Installation Process:** 

Responsible	
Party	Turf Removal Installation and Completion Notification
Customer	Customer removes turf, installs new landscaping and irrigation
	Ψ
	Customer sends notification to MWDOC via email or phone
Customer	Notifying MWDOC their project is complete

#### Turf Removal Installation and Completion Notification Recommendations

It is recommended that the Turf Removal Installation documentation and communication process be redesigned to allow for increased functionality and customer convenience. Specific recommendations are detailed in Section 3 of the document.

**Step 7: The Post-Work Order Generation and Distribution Process:** 

Responsible Party	Post-Work Order Generation and Distribution
WUE Intern	Database updated with customer's notification as project
	completeness
	₩
Auto	Post-work order created in Program database
	₩
Auto	Post-installation inspection work order sent to inspection vendor
	or appropriate water agency
	₩
	Customer sent email notifying them they will be contacted to
Auto	schedule post-inspection

#### Post-Installation Work Order Generation and Distribution Recommendations

This process should be redesigned with automated customer communication and post-work order generation. Specific recommendations are detailed in Section 3 of the document.

**Step 8: The Post-Installation Inspection Process:** 

Responsible Party	Post-Installation Inspection
Inspection Vendor or Water Agency	Inspection vendor or water agency conducts post-inspection including: measuring square footage, taking pictures of turf areas removed, obtaining customer project receipts, and completing post-work order
	Ψ
Inspection Vendor or Water Agency	Inspection vendor or water agency scans receipts
	<b>V</b>

Inspection Vendor or Water Agency	Inspection vendor or water agency sends email with completed post-work orders, pictures and project receipts to MWDOC
	Post-installation inspection work order results, pictures and
WUE Analyst	project receipts saved to appropriate file
	Ψ
	Post-work order and attachments reviewed to validate the final
	square footage, ensure documents are complete and signed by
WUE Intern / WUE	the inspector, verify the project receipts show eligible project
Analyst	cost to determine the maximum allowable rebate (rebates paid
	cannot exceed the overall project cost), and confirm the photos
	show project areas that comply with program guidelines.
	Ψ
WUE Intern / WUE	Post-work order results entered into Program database using
Analyst	form
	Ψ
WILE Analyst	If missing documentation, request submitted to customer or
WUE Analyst	water agency
	•
WUE Analyst	Batch created and prepared for Accounting

# **Post-installation Inspection Process Recommendations**

It is recommended that this process be upgraded to allow automated email communications and centralized electronic record storage. Specific recommendations are detailed in Section 3 of the document.

**Step 9: Application Approval Process** 

Responsible Party	Application Approval
WUE Analyst	Project costs reviewed for eligibility and total costs tabulated
WUE Analyst	Rebate amount tabulated, verified in database and updated as necessary
WUE Analyst	Purchase requisition created for each funding agency

WUE Intern / WUE Analyst	Print application, post-work order form, and copies of receipts
WUE Analyst	Assemble batch for management and accounting review/approval - batch includes master summary page, summary pages for each water agency with attached application backup
WUE Analyst	Batch sent to management for approval
WUE Manager	Management reviews each application and summary pages, checks receipts and rebate amount and signs off on each application

#### **Application Approval Process Recommendations**

It is recommended that MWDOC change the current purchase order format and consolidate each funding line item into one. Currently each application is an individual line item. *Note: since the writing of this document, this upgrade has been implemented.* It is also recommended that the system be designed with the capability to generate a report spreadsheet utilizing all necessary information stored within the system. Specific recommendations are detailed in Section 3 of the document.

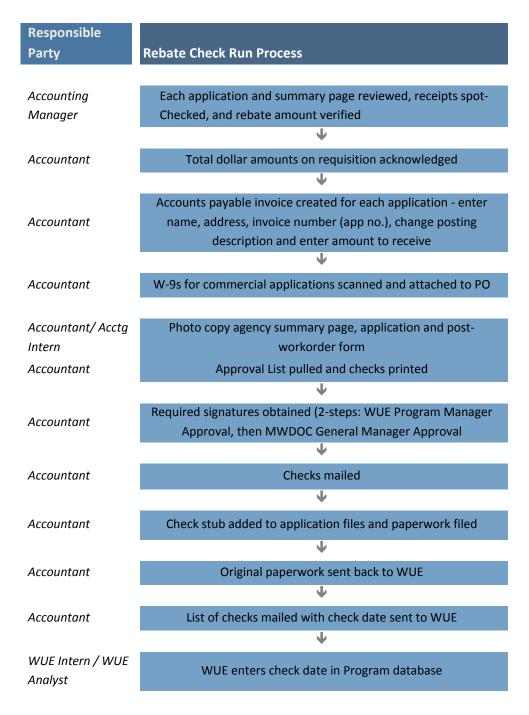

**Step 10: Board Approval Process:** 

Responsible Party	Board Approval
WUE Analyst	Approval Report spreadsheet generated with each application, total rebate amount, MWD amount, and water agency amount (regional costs)
WUE Analyst	Approval Report spreadsheet submitted to accounting
Accountant	Approval Report sent to Administration and Finance Committee  for approval
Admin and Finance Committee	Rebates approved

#### **Board Approval Process Recommendations**

It is recommended that the system be designed with the capability to generate a report spreadsheet utilizing all necessary information stored within the system. Specific recommendations are detailed in Section 3 of the document.

**Step 11: The Rebate Check Run Process:** 

**Rebate Check Run Process Recommendations** 

It is recommended that batch reports be automated and accounting staff possess the ability to manage applications and generate summary level reports online. Specific recommendations are detailed in Section 3 of the document.

**Step 12: Metropolitan Water District and Member Agency Invoicing Process:** 

Responsible Party	MWD and Agency Invoicing
WUE Intern /	Compile rebates paid and invoice MWD and funding water
WUE Analyst	agencies
	<del></del>
WUE Analyst	Tabulate pre- and post-inspection costs from Regional inspection  Vendor and bill appropriate member agency

## **MWD** and Member Agency Invoicing Recommendations

The system should be automated to handle invoicing and fund tracking requirements. Specific recommendations are detailed in Section 3 of the document.

# **Section 3: Findings and Recommendations**

Consultants Maureen Erbeznik and John Koeller spent a number of hours examining program documents, reviewing procedures, and interviewing program staff. It became clear, early on, that the TRRP operates with the highest level of operational and financial oversight.

Examples of the robust quality measures are bulleted below:

#### **Current Program Process Checks and Balances**

- Each customer's water bill is checked for eligibility and a matching customer entry.
- Pre-work order photos (provided by customer) are checked to verify site has existing irrigated turf (customers are allowed to have dead grass due to the drought situation turf must show signs that it was irrigated in the recent past) and other requirements.
- 100 percent of sites receive a pre-inspection. At the site visit, the inspection vendor or the member agency measures the square footage, takes photos, and documents that information in a report for MWDOC.
- 100 percent of sites receive a post-inspection. The regional inspection vendor or the member water agency measures the square footage, takes photos, obtains customer receipts, and reports on the completed project.
- Following completion of the project by the customer, the regional inspection vendor or member agency measurement of square footage is used to calculate and pay the qualified rebate. (The customer self-reported square footage is not used for rebate calculations).
- Program staff reviews all applications pre- and post- photos, inspection results, and customer receipts. Customer receipt amounts are totaled to determine eligible cost and, ultimately, the overall project cost. Rebates paid to the participant cannot exceed actual project costs.
- Three MWDOC staff (program analyst, the Water Use Efficiency Manager, and an accounting staff member) review the application, the water bill, and the project invoices. Each individual signs off on every rebate customer packet

It is important to emphasize that the program follows a higher-than-standard level of financial and program controls and the program operates with a high level of program integrity, as a result of the above.

Efficiency has also increased recently due to automation of some TRRP processes. Similar opportunities for improvement exist in the further automation and cohesiveness of all program processes.

#### **Opportunities for Improvement**

Despite comprehensive program oversight, there are several opportunities for improvement:

- 1. Though automation of several processes exists, management of the Program is still largely manual and requires duplicative data entry efforts. For example, self-reported customer data must be moved manually from the Gizmo program to an Excel spreadsheet and then from the Excel to an Access database.
- 2. The Program is managed using three separate Access databases: Canceled, Open, and Completed. The three independent databases make it challenging to produce reports and account for changes across all databases. Applications must be manually transferred from one database to another, depending upon the actions taken. Limited participant and financial tracking and notifications of this process exist.
- 3. Duplicate data entry exists from the customer into database and by the Program Analyst into the Excel spreadsheets. Manual data transfers have the potential for producing errors if an application is incorrectly entered.
  - Duplicate data entry may result in data inconsistency, which ultimately requires additional staff resources and processing time.
  - Lack of automatic notifications to customers, inspection personnel, and others may cause an application to be lost and/or delayed in the process.

#### **GENERAL RECOMMENDATIONS**

Although there are a number of specific system and/or process recommendations, there are five general categories of process improvement recommendations.

It is recommended that:

- 1. **Automatic triggers** are incorporated at key milestones to send notifications to customers, the inspection vendor, member agencies, and MWDOC staff and management.
- 2. There is a **single database** to track the entire process of the application, from customer submittal through rebate payment. The single database should include all customer documentation including, but not limited to, water bills, site photos, site plans, and project invoices.
- 3. **Program portals** are created for program management, member agencies, the inspection vendor, accounting staff, and customers. MWDOC and its member agency staff should have easy access to a customer file. Customers should be able to securely access selected personal

elements of the process, and MWDOC staff should be able to readily view all pertinent program data.

- 4. Member agencies and the inspection vendors be equipped to perform their own data entry after pre- and post-inspections and that both parties assume responsibility for uploading photos and project receipts into the database. All such files, pre- and post-installation photos, water bills, site plans, and receipts would then be uploaded and accessible through the program portal in real-time.
- Automatic emails be generated for each status report and milestone including, but not limited to, missing information alerts, inspection notifications, and customer documentation submittals. Such emails would be sent to member agencies, the inspection vendor, customers, and MWDOC staff as appropriate.

#### **DETAILED RECOMMENDATIONS**

Although most of the above recommendations require a longer timeline in which to implement, there are two short-term recommendations that will provide more immediate benefits:

#### **Short Term Recommendations**

- 1. Create query from database to generate Approval Report and Accounting Summaries.
- 2. Change current purchase order to consolidate each funding line item into one line item, as opposed to having a line item for each application. This would reduce manual entry of each application by analyst. *Note: since the writing of this document, the upgrade has been implemented.*

## **Long Term Recommendations**

In order to streamline various processes, decrease processing time, increase customer satisfaction, and reduce labor costs, it is recommended that MWDOC strongly consider purchasing or developing custom software to process turf removal rebates.

The software could potentially incorporate other rebate programs, such as drip irrigation and landscape irrigation retrofits, as well as other elements of MWDOC's menu of conservation programs. This would create efficiencies not only in the TRRP, but also in all of MWDOC's conservation programs and efforts.

The following is the summary of the features of the recommended software program:

### **Application Submittal**

The entire application process would be online for the customers from the point of application submittal to the final paperwork submittal and rebate check status. All application data would be automatically stored in the single Program system, eliminating the need for multiple databases, duplicate data entry, and manual report generation. Customers would be given secure access to their personal portal where they can upload needed documents, access information, track the progress of their application, and communicate with program administrators when necessary. This would streamline processes and keep workflows in a single system. Upon application submittal, customers would automatically receive a personalized email stating that their application has been received, their application number, and their personal password. The system would have the capability to eliminate all manual data importing, data entry by MWDOC staff, report generation, customer contact, and reformatting that is currently necessary in today's application submittal process.

If feasible, the portal would contain educational videos that describe the Program process and provide direction through each step of the turf removal and new landscape installation.

### **Application Review**

All application data would be stored within the single online system. Program staff would view and process all information within the confines of the online system (no external paperwork or processes would be necessary). Access to data and processing ability would be defined by MWDOC. All data for a given application and project would be attached to the record, including scanned copies of bills, pre- and post- photos submitted by the customer and/or the inspector, site plans, and customer receipts.

Received applications would be evaluated; those that are eligible would be processed, others would be withdrawn (due to ineligibility), or put on hold all with a single click of the reviewer. Regardless of the action taken, all data stored in the system would be accessible for review or reporting at any time. Depending upon the action that is taken, a personalized email would automatically be sent to the customer informing them of the action taken or due to be taken. Staff could add content to the email to explain why an application was approved, withdrawn, or put on hold. Staff could also add internal notes that would attach to the customer record. Upon accessing the portal, the customer would be prompted to proceed to the next step in the process.

## **Pre-Installation Workorder Generation and Distribution**

Once an application is approved for processing, the system would automatically generate an email to the inspection vendor or designated member agency representative. The inspection vendor or member agency would have their own login to the portal where they can view their assigned customers (as defined by MWDOC). The automatically generated email could have an attached work order if necessary for accounting. However, the software could eliminate the need for this step

completely. MWDOC Accounting and management would have access to the portal to view inspection results, receipts, other required documents, and Program progress.

#### **Pre-Installation Inspection**

The inspector (vendor or member agency representative) would log into the portal and upload the required inspection information, including square footage, photos, and any other pertinent site information received from the customer. This could be done on a tablet device while at the site or from any computer. Inspection information would immediately be available on the customer's record without any further steps. Once new information from the inspector is uploaded, the Program administrator would automatically be notified within the portal and via email if desired. This would eliminate the need for the inspector to manually generate emails or separate documentation.

#### **Notice to Proceed**

Once the inspection information is uploaded into the system, the customer's application would be approved, denied, withdrawn, or put on hold with a single click by MWDOC staff. If a customer is denied, withdrawn, or put on hold, all information would be archived within the system for later viewing and analysis. Once staff takes the appropriate action, the customer would automatically receive a personalized email notifying them of the action taken and what next steps will be taken. Customers could also be informed of next steps within the portal. The Program administrator could add content to the email explaining why the customer was approved, denied, withdrawn, or put on hold.

## **Turf Removal Project Installation and Completion Notification**

Upon completion of the project, the customer would upload "after" photos, project receipts, and/or other required information directly to their personal portal. This action would automatically notify Program staff to conduct further review of the customer's progress.

### **Post-Installation Workorder Generation and Distribution**

Once customer status is moved to complete and documentation uploaded, if required, an automatic email would inform the customer they would be contacted to schedule a post project inspection. An email would also automatically be sent to the inspector. Again, a post-workorder could automatically be generated and included in the email. The inspector would login to the system and view customer information. This step could be completely automated within the system.

#### **Post-installation Inspection**

Inspection staff could upload all information directly into the portal from a tablet device in the field or from a computer. All information including photos, project receipts, and all other miscellaneous information would be uploaded to the customer record. The Program administrator would be

notified within the portal once the inspection is completed and, if necessary, by an automatically generated email. This would eliminate the need for the inspector to manually generate emails or separate documentation. If documentation were incomplete, the appropriate person or agency would be notified by email directly from the system by Program staff.

### **Application Approval**

All project costs and available budgets from all funding sources would automatically be tracked by the system through the process. The program administrator would review rebate amounts and modify them, if necessary, within the system. Once the application is approved for issuance of a rebate, the system would automatically generate a purchase requisition. Batch reports would be created for management and Accounting at automatic intervals or upon demand. The information in these reports would be predefined and not require any manual processes. Batch reports and purchase requisitions would be emailed to appropriate departments or management. Accounting staff would have the ability to view and approve reports, applications, and forms directly within the system. This would eliminate the need for paper documentation, streamline workflow, and eliminate some external processes.

### **MWDOC Board Approval**

The system would be capable of generating multiple report spreadsheets with all necessary information that is stored within the system. These reports would include funding amounts and sources, and would be submitted to the Board.

#### Rebate Check Run

Batch reports could be created for accounting staff at automatic intervals or upon request from within the system. In addition, the Accounting department could check applications and project receipts, as well as verify and approve rebate amounts, all within the system. A report could be generated and sent to Accounts Payable (in Excel or CSV format) with information in the prescribed Accounting format to generate checks. For commercial applications, the customer's W-9 would be uploaded directly into the system by the customer and attached to the customer's record if necessary. Although the system will not impact the check mailing process, the system would allow staff to enter check dates to be stored with the customer's record.

#### **MWD** and Member Agency Invoicing

The system would be capable of generating multiple invoicing reports and the associated spreadsheet back-ups necessary to invoice MWD and member agencies. The system would also track funds and send emails when funds are nearing depletion. The system would also be able to provide aging reports on those participants who have exceeded their time at any of the steps along the way.

## <u>Side-by-Side Comparison of Existing Systems/Processes and Recommendations</u>

The charts below provide a clear visual of the recommendations being made as they apply to each existing step in the process.

## **System/Process Comparison Tables:**

Application Submittal Process	
Current Process	Recommended Process with Automation
Customer submits application online or hard copy	Customers would select their agency and create a portal account. Each customer's portal account would be secured by their email address and a self-selected password. Within the portal they would complete the application and upload any needed documentation. (If the customer is unable to create electronic versions of documentation, the customer would mail hard copies to MWDOC.) Hard copy applications could be uploaded to the system by WUE staff.
	Customers <u>could</u> be required to watch an educational video and complete an assessment through the program website to ensure that they are familiar with the program requirements prior to submitting an application.
Online data imported from Survey Gizmo to Excel	The customer would enter initial data directly into the proposed software system. The system would allow role-based access to data and would eliminate the need for other databases. The system would provide a single source of record, which is useful for long-term program tracking, analytics, and streamlining workflow processes.
Excel data checked for matching water agency	Customers would select their agency when submitting their application. If an agency makes their customer data available, the validation could be automated. If customer data is not available, customers could upload a copy of their bill, which would be attached to the customer record. Program staff would verify the bill to their selected agency online.
Hard copy applications and attachments scanned by Admin to laserfische and forwarded to WUE	The hard copy application submittal process would more than likely stay the same. All such information would be added to the Program database through a standard data entry process.

Hard Copy application data entered into Excel	Hard copy applications would be entered into the system by Program staff. Once entered into the system the application would move through the system the same as customer entered applications.
Excel spreadsheet reformatted for Import	The reformatting process would be eliminated because the system would serve as a single source of record for the program.
Excel data imported into Access database	The importing data process would be eliminated. The system would store all data securely. Data would be searchable, and system could generate needed reports, eliminating the need for a separate Access database.
Batch report printed listing received applications	The batch report process could be eliminated. Based upon roles given to specific program staff, computer screens listing all applications needing review would be presented to the staff person as part of their tasks.

Application Review Process	
Current Process	Recommended Process with Automation
Email of application and attachment received into Turf Removal program email	This process would be eliminated. All application information would be entered directly into the system by the customer and available for review.
Each application PDF is separated and saved into the appropriate file. PDF includes water bill, photos and site plans	The process of separating and saving applications and their associated documentation would be eliminated. All application information would be entered directly into the system by the customer and validated by staff.
Application fields reviewed, water bill checked for eligible agency, photos & site plan viewed to verify condition of turf & other eligibility	Application information could be reviewed on a single screen in the system. All other documentation could be viewed through links available on the screen.
Process or cancel application	Applications could be approved, denied, put on hold, or withdrawn with a click in the system.
If canceled application, line item deleted from database and email/letter sent with reason for cancelation	All application data could be saved and archived within the system for reporting. Personalized emails could be automatically generated and sent to the customer.

Pre-Workorder Generation and Distribution	
Pre-workorders created in Access database	The process of creating pre-workorders would be eliminated.
Pre-workorder email with attachments sent to inspection vendor or appropriate water agency	The system could automatically generate an email with pre-inspection workorder information to be sent to the inspection vendor or the member agency representative.

Pre-Installation Inspection	
Current Process	Recommended Process with Automation
Inspection vendor or member agency conducts pre-inspection including: measuring square footage, taking pictures of turf areas to be removed and completing pre-installation workorder	Inspector portal would allow information to be entered directly into the system. In addition, any documentation could be uploaded directly into the system. This could be done onsite via a tablet device or through any computer.
Inspection vendor or member agency sends email with completed pre-workorders and pictures	Information would be uploaded directly into the system, eliminating the need for this step.
Pre-workorder and pictures saved to appropriate file	Information would be uploaded directly into the system, eliminating the need for this step.
Pre-workorder results entered into database using form	Information would be uploaded directly into the system by the inspector and MWDOC would be automatically notified when completed, eliminating the need for this step.
If results do not pass, customer information provided to WUE Analyst for notification	Information will be uploaded directly into the system, eliminating the need for this step.

Notice to Proceed	
Current Process	Recommended Process with Automation
After results entered into database, if pass auto <i>Letter-to-Proceed</i> email sent to customer with FAQs	The system would automatically generate a Letter-to -Proceed email and send to the customer.
If not pass, customer line item moved from Open database to Canceled and customer sent disqualify email/letter	The system would automatically generate an email stating why the project did not pass the inspection. The application would automatically be archived.

Turf Removal Project Installation and Completion Notification	
Current Process	Recommended Process with Automation
Customer removes turf, installs new landscaping and irrigation	The system could have additional support materials and videos accessible by customer to support them through the process of removing their existing turf, installing new irrigation system and new plants. The system could also automatically send reminder emails to the customer to maintain engagement.
Customer sends notification email or phone call that the project is complete	The customer would report that the project is complete through the portal and attach any needed documentation directly through the portal. Program staff would be notified automatically through the portal or email.

Post-Workorder Generation and Distribution	
Current Process	Recommended Process with Automation
Database updated with customer notification project complete	This step would be eliminated because the customer would log their project as complete through the portal.
Post-workorder created in Access database	The system would automatically generate post-workorders, therefore this step would be eliminated.
Post-workorder sent to inspection vendor or appropriate water agency	The system would automatically generate an email with post-inspection work order information to be sent to the inspection vendor or the member agency representative.
Customer sent email notifying them they will be contacted to schedule post-inspection	Customer would automatically be sent a personalized email notification. This message would also be displayed in the portal.

Post installation Inspection	
Current Process	Recommended Process with Automation
Inspection vendor or member agency conducts post-inspection including: measuring square footage, taking pictures of turf areas removed, obtaining customer project receipts, and completing post-workorder.	Inspector portal would allow information to be entered directly into the system. In addition, any documentation could be uploaded directly to the system. This would be done onsite via a tablet device or through any computer.
Inspection vendor or water agency scans project receipts.	Project receipts could be either uploaded by the customer or by the evaluator depending upon decided workflow and the customer's capability to create an electronic version of receipts. This can be done by taking a picture

	of the receipt and uploading it directly into the system and could be done onsite during the site inspection.
Inspection vendor or water agency sends email with completed post-workorders, pictures, and project receipts.	Information would be uploaded directly into the system, eliminating the need for this step.
Post-workorder, pictures, and project receipts saved to appropriate file.	Information would be uploaded directly into the system, eliminating the need for this step.
Post-workorder and attachments reviewed to validate the final square footage, ensure documents are complete and signed by the inspector, verify the project receipts are eligible, confirm the photos show project areas that comply with program guidelines.	Application information could be reviewed on a single screen in the system. All other documentation could be viewed through links available on the screen.
Post-workorder results entered into database using form.	Information would be uploaded directly into the system, eliminating the need for this step.
If missing documentation, request submitted to customer or water agency.	If documentation were incomplete, the appropriate person or agency would be notified by email directly from the system by Program staff.

Application Approval	
Current Process	Recommended Process with Automation
Project receipts reviewed for eligibility and total costs tabulated	The project receipts would be attached to the customer record and accessed through the system. The system would allow for entry of each cost/receipt, automatically tabulating the total costs.
Rebate amount tabulated, verified in database, and updated as necessary.	The system would automatically tabulate the total costs and compare the total against the requested rebate. If different, the customer would be notified automatically via email of the discrepancies. The customer could be given the option to provide additional project receipts or would give permission to MWDOC to process the amount as tabulated. This could be done directly in the system
Purchase requisition created for each application.	A report of all rebates at a specific status such as "inspected" or "approved" would be generated by the system on a routine basis.
Print application, post-workorder form, and copies of project receipts.	This step will no longer be necessary, but if required by Accounting or management, the system could print the required information in desired format as well as any attachments.

Assemble batch for management and accounting review/approval - batch includes master summary page, summary pages for each water agency with attached application backup.	The summary report could be generated by the system or applications can be viewed directly by management and Accounting within the system.
Batch sent to management for approval.	Management could view and approve reports and applications directly within the system.
Management reviews each application and summary pages, checks receipts and rebate amount and signs off on each application.	Management could view and approve reports and applications directly within the system.

Board Approval					
Current Process	Recommended Process with Automation				
Approval Report spreadsheet generated with each application, total rebate amount, MWD amount and water agency amount (regional costs).	The system would generate the Approval Report. Accounting would produce the report directly from the system.				
Approval Report spreadsheet submitted to accounting.	Accounting would produce the report directly from the system.				
Approval Report sent to Administration and Finance Committee for approval	Accounting would provide the system-generated report.				

Rebate Check Run					
Current Process	Recommended Process with Automation				
Batch sent to accounting	The report would be generated by the system. Applications could be viewed directly by Accounting within the system. The batch can also be exported and manually sent to Accounting if deemed necessary.				
Each application and summary page reviewed, receipts spot-checked and rebate amount verified	Random applications could be selected by the system and presented on computer screens for Accounting review and approval.				
Each line on requisition (application) acknowledged	This is done in MWDOC accounting system, Navision, and would still need to occur.				
Accounts payable invoice created for each application - enter name, address, invoice number (app no.), change posting description, and enter amount to receive	A report could be generated by the system that includes this information in the required accounting format.				
W-9s for commercial applications scanned and attached to PO	W-9s would be uploaded directly into the system and attached to the customer record if necessary. Accounting would generate a report of all customers with W-9s. The report				

	would list the required information for generating W-9s.
Photo copy agency summary page, application, and post-workorder form	This step may no longer be necessary.  Accounting would access this information on summary reports directly within the system.  However, the system could generate summary reports, application pages, and work order forms if required.

MWD and Member Agency Invoicing				
Current Process	Recommended Process with Automation			
Compile rebates paid and invoice MWD and funding member agencies	The system would generate an invoice report and the associated spreadsheet backup necessary to invoice MWD and member agencies. The system would also track funds per funding agency and send notifications when funds are nearing depletion.			
Tabulate pre- and post-inspection costs from the inspection vendor and invoice appropriate member agencies accordingly	The system would tabulate the number and type of inspections and produce an invoice report and associated backup necessary to invoice member agencies.			

## **Conclusion**

MWDOC's Turf Removal Rebate Program has realized high achievement on many fronts. Management has created a program with unparalleled quality standards and staff has stepped up to the task of providing meticulous oversight.

With the recent surge in program response, however, the processes and software systems are now taxed to the limit of their capabilities. While there are steps to be taken in the short run to alleviate some process burdens, the optimal solution for the longer term is to buy or build a rebate management system with the modules and capabilities that best meet today's Program volume and customer service demands.

Existing available software systems can be modified to meet the needs of the Program; an analysis of the various available packages can identify the ones that best match the functionality and quality required for MWDOC. Another option is for MWDOC to build a custom software system for the Program or, possibly, for all of MWDOC's rebate programs. There are several quality software programming firms that have specific industry rebate experience.

By implementation of the report recommendations, MWDOC would see significant procedural improvements in consistency, efficiency, customer satisfaction, and application turn-around time. A single data basing and processing system would eliminate a great number of manual and redundant procedures that currently take place. This would potentially allow MWDOC to reduce the personnel required to manage the Program, freeing staff up to provide even higher levels of customer service and to further support department programs. Member agencies will also benefit from the efficiencies of online processing, automatic notifications, and reporting available through the portal.

A state-of-the art software system would also allow for the following:

- A heightened level of customer interaction and satisfaction. Through a customer portal design, customers can have the resources to track their application status and view any number of educational videos. This should result in a higher level of customer satisfaction.
- A sophisticated financial tracking system. This would allow MWDOC's program management staff to accurately know at any of the rebate steps along the way where any financial constraints exist.
- Participant tracking. The system would have the ability to know where a participant is within
  the various steps. It would be able to provide aging reports to MWDOC staff and emails to
  participants to encourage their continued progression with their individual projects.
- Reporting. Multiple reports/data tables from any point in the application/rebate process could be generated for review by MWDOC or its participating member agencies.
- *Program integration*. MWDOC's additional in-house rebate programs could be integrated into the rebate processing system.
- Member agency efficiencies. Member agencies would benefit from efficiencies in the preand post-inspection process including: automatic notifications, portal data entry, portal documentation upload, and in-field data entry capability.

# Status of Ongoing MWDOC Reliability and Engineering and Planning Projects

# March 31, 2015

Description	Lead Agency	Status % Complete	Scheduled Completion Date	Comments
Baker Treatment Plant or Expansion of Baker Water Treatment Plant	IRWD, MNWD, SMWD, ETWD Trabuco CWD		On line date is early 2016	Karl Seckel and Kevin Hostert participated in a shutdown meeting to plan for the March 2015 connection of the Baker Treatment Plant Pipeline to the South County Pipeline. Unfortunately, the 30" high performance butterfly valve provided by the contractor had an incorrect bolting pattern for both flanges. The initial thought was that a new valve would take 16 weeks to provide and so the shutdown would have to be delayed until the November timeframe. Subsequently, the contractor was able to secure a replacement valve and the shutdown is in the process of being rescheduled at this time for the first or second week in April.
Doheny Desalination Project	MWDOC			Work continued under the MET Foundational Action Plan and with the baseline monitoring work required for the coastal lagoon and the lower portion of San Juan Creek.
Poseidon Resources Ocean Desalination Project in Huntington Beach				<ul> <li>The OCWD staff has circulated a revised term sheet for the Poseidon Project that includes:</li> <li>50-year deal</li> <li>Sliding scale for the cost of the Poseidon water at the Plant fenceline that begins at 20% above the cost of MET water and declines by 5% above the cost of MET water each year such that the last 10 years of the deal, the water is at the cost of MET water.</li> <li>Over the 50-year deal, the water averages 10% over the</li> </ul>

Description	Lead Agency	Status % Complete	Scheduled Completion Date	Comments
				<ul> <li>cost of MET water.</li> <li>The delivery of the water and the costs of system integration still needs to be itemized and added into the equation. MWDOC and OCWD are working together, especially on the use of the EOCF#2 for delivery of a portion of the water and for securing the LRP contract from MET for the project.</li> <li>OCWD has initiated meetings with its Citizen's Advisory Committee on the Project.</li> </ul>
Orange County Water Reliability Study				Karl Seckel and Richard Bell hosted the March Workgroup meeting for the OC Water Reliability Study following the Manager's meeting. The bulk of discussions were held regarding CDM's (study consultant) regression analysis of total OC water consumption between 1989-90 and 2014. The regression analysis was also used to analyze the three sub-area - the Brea/La Habra area, the OCWD basin and the remaining South portion of the County outside of OCWD. CDM also used information from the member agencies to derive unit use factors for Single Family, Multifamily, Commercial, Industrial and non-revenue water. A good discussion occurred with respect to recycled water demands and how it might influence derivation of the unit use factors. Based on the discussions and input, CDM agreed to further examine a methodology to break out the recycled water use by various methods and bring back the results to the workgroup. IRWD offered information relative to demands and unit use factors in the IRWD service area that might be applicable to SOC. Because of the length of the discussions on how best to handle

Description	Lead Agency	Status % Complete	Scheduled Completion Date	Comments
				this issue, the Workgroup did not get to discuss what level of demands to plan for in emergency situations. This was pushed over to next month. CDM also noted that they are still awaiting the DWR report for the 2015 Reliability of the SWP supplies Report to be released; this report is needed as input for the modeling work on supplies.
				A meeting was held between MWDOC, CDM, IRWD and IRWD's consultant working on a reliability model for IRWD. The idea is to coordinate the efforts and to share information between the two efforts. The meeting went well.
Other Meetings/Work				
				Joe Berg and Director Susan Hinman participated in the South Orange County IRWMP Executive Management Group discussions. There have been many changes of representatives participating in the Executive Management Group and so time was spent on reviewing the purpose of the group and the proposed two-year budget. Discussions occurred on future discussions between a Steering Committee of members from the Executive Group (mostly elected) and the Management Group (mostly staff) to work on the vision and focus for water supply reliability in SOC. Director Susan Hinman volunteered to participate on a nominating committee to help fill an open City Member position.

Description	Lead Agency	Status % Complete	Scheduled Completion Date	Comments
				Richard Bell attended the San Juan Basin Authority meeting in March where discussions continued on basin monitoring and management. Cathrene Glick reported on the status of the basin activities related to the Groundwater Management Plan.
				Karl Seckel, Rob Hunter and Legal Counsel Russ Behrens met with Dan Ferons and SMWD Legal Counsel Scott Smith to discuss both the Cucamonga Valley Water District water exchange with SMWD and the letter received from MET regarding the South County Pipeline. Further discussions will follow.
				Keith Lyon and Kevin Hostert participated in a shutdown planning meeting to test the ability of the City of Newport Beach to provide emergency water to Laguna Beach CWD. MET staff were involved. The test simulated an outage of the MET system and tested the ability of NB to control and deliver flows to Laguna Beach out of Big Canyon Reservoir via the CM-1A meter. The test was successful in better understanding future emergency operations options.
				Keith Lyon and Kevin Hostert participated in a field meeting with MET and the City of La Habra to test the shutoff valve at OC-45; La Habra is preparing to rebuild the flow control facility and needs to know that the MET valve will hold tight during the 6 month construction process. The field meeting and test confirmed the valve held without significant leakage.
				Heather Baez attended and presented MWDOC's letter of support

Description	Lead Agency	Status % Complete	Scheduled Completion Date	Comments
				for the SDG&E \$475 million South Orange County Reliability Enhancement Project. Only about 40 people attended the meeting, most in support of the project.
				Richard Bell is in the process of reviewing about 800 pages of revisions and responses drafted by the State Water Resources Control Board for the Draft Substitute Environmental Documentation and Amendment to the Water Quality Control Plan for Ocean Waters of California addressing Desalination Facility intakes, brine discharges and the incorporation of other non-substantive changes. The documents were released last week, comments are due in April and the SWRCB will conduct hearings on May 5. Richard is part of the CalDesal Regulatory Workgroup that has been working on this issue for the past 3 years. Quite a few of the MWDOC and CalDesal comments have been incorporated, however, there are a number of suggestions and input still to be made to the document.
				Karl Seckel along with MWDOC and MWDOC MET Directors Larry Dick and Brett Barbre attended the City of Anaheim retirement function honoring Don Calkins. Even though Don will be honored at a future MWDOC event, Karl dug deep in his wine reserves to come up with a special "Da Don Wine" Handcrafted in the Hills of Anaheim Far Away from the Coastal Influence, Nurtured by the Pristine waters of Anaheim's Well #47 and thanked Don for all of the good work together over the past 19 years!
				Karl Seckel, along with Rob Hunter and MWDOC Director Sat

Description	Lead Agency	Status % Complete	Scheduled Completion Date	Comments
				Tamaribuchi presented an overview of the OC Water Reliability Study to the ETWD Board of Directors. The presentation was well received.
				Karl Seckel and Cathy Harris met with Mike Markus, John Kennedy, Eleanor Torres, Bonnie Howard and the design consultants to discuss and prepare for an upcoming Joint Building Committee to review concepts, designs, building materials and furnishings for the Board room, Board lobby, entrance lobby and conference room C-3 to prepare for the Ad Hoc Building Committee to seek concurrence from the two agencies to move forward. Karl and Cathy also met with the design consultants to look at MWDOC's entry lobby and bathrooms. The Ad Hoc Committee will be scheduled in the next several weeks.
				<ul> <li>Karl Seckel attended the CalDesal Board meeting in Sacramento where discussions included:</li> <li>Mission, direction, finances and goals for 2015-16, including an emphasis on salt management and brackish desalting as well as ocean desalting</li> <li>SWRCB Ocean Plan Amendment process and the recently released documents</li> <li>Legislation that involves desalination or regulations</li> <li>Prop 1 Bond Funding and removing the \$5 M limit on desalination projects</li> <li>CalDesal Whitepaper on Ocean Desalination in the State</li> <li>Plans for the Annual Conference in October</li> </ul>

## Status of Ongoing WEROC Projects March 2015

Description	Comments
General Activities	Kelly Hubbard met with the general managers or designated staff of the WEROC funding partners over the course of a couple meetings to present the draft WEROC budget. WEROC funding partners include the three MET cities, South Orange County Wastewater Authority, Orange County Sanitation District, Orange County Water District and MWDOC. The meetings are often used to discuss the program's activities and any projects of interest for the coming year.  Brandon Stock, WEROC Coordinator, attended a MET inspection trip to Diamond Valley Lake and the Lake Skinner Treatment Plant. Brandon also attended Alert OC and WebEOC training, as well as multiple coordination meetings with various MWDOC departments and agencies to enhance his knowledge of water systems and current WEROC programs.
Coordination with Member Agencies	UPDATE: Kelly continues to lead MWDOC Public Affairs staff, cities, water utilities, and the County Emergency Management staff for the planning of the Alert OC live drill scheduled for April 7 <sup>th</sup> . WEROC has hosted five (5) trainings on how to use the administrative component of Alert OC called Blackboard Connect, as well as three (3) regional coordination meetings, and many smaller meetings to coordinate the logistics of this exercise. WEROC staff, in coordination with MWDOC Public Affairs staff, have developed the AlertOC Regional Test Exercise Plan for the drill that includes information on the participating agencies (noted below), test exercise procedures, standardized message scripts, and a media packet for public outreach. Participating agencies are being asked to utilize a standard script for consistency of messaging. This is the first time the water utilities have been provided the opportunity to use AlertOC for a test exercise. An After-Action Report is expected to be available for the May Planning & Operations Committee. Participating Cities: Anaheim, Brea, Buena Park, Costa Mesa, Cypress, Fullerton, Garden Grove, Huntington Beach, La Habra, La Palma, Laguna Beach, Newport Beach, Placentia, San Clemente, San Juan Capistrano, Santa Ana, Seal Beach, Stanton, Tustin, and Westminster. Participating Special Districts: East Orange County Water District, El Toro Water District,

Description	Comments
	Laguna Beach County Water District (via City of Laguna Beach), Moulton Niguel Water District, Santa Margarita Water District, Serrano Water District, South Coast Water District, Trabuco Canyon Water District, and Yorba Linda Water District.
	Kelly provided a second session of a 2 hour training called "Bare Bones of Response" for member agency staff. The training covered what is the bare minimum information that is needed from member agencies during emergencies and the various communication methods that can be utilized. Overall the message to the agencies was to keep their response concepts simple, as long as WEROC receives critical pieces of information. The training was well received.
	WEROC hosted a planning meeting for Surf Quake 2015, the disaster exercise to be held on May 21. The planning meetings are used to assist member agencies in their planning and development of their internal exercises, as well as WEROC's exercise.
	Kelly provided a WebEOC (online emergency information tool) Training on March 12 to both WEROC EOC staff and to member agency staff. WebEOC is used as the primary tool for collecting and displaying emergency response related information to first responders and agencies.
	Kelly met with staff from the City of San Juan Capistrano's Public Works Department, Water Division, and Emergency Management on March 16 to discuss the City's preparedness and desire to become more involved in emergency planning and specifically WEROC. Kelly was able to provide staff with overviews on services that WEROC provides and ways to become more involved at both the County level and with WEROC. The City staff were excited to learn about some opportunities and have already increased their communications and participation.
	At the request of a WEROC Member Agency, Kelly worked with the Orange County Intelligence Assessment Center (OCIAC) to find out more information about a terrorist threat against a water utility on the East Coast. The OCIAC determined that the threat did not have potential implications for Orange County utilities, but it was a good reminder for our agencies to stay vigilant. Related to this incident, it was determined that the OCIAC would try to receive

Description	Comments
	Water Information Sharing and Analysis Center (WaterISAC) membership for WEROC staff as OCIAC representatives for water in OC. The Water Information Sharing and Analysis Center (WaterISAC) was authorized by Congress in 2002 and created and managed by the water sector. Its mission is to keep drinking water and wastewater utility managers informed about potential risks to the nation's water infrastructure from contamination, terrorism and cyber threats. Additionally, WaterISAC membership is very costly, however the OCIAC as a FBI coordination agency should be able to receive membership for free. Lastly, WEROC staff will be exploring the idea of a water contamination scenario for a future disaster exercise.
Coordination with the County of Orange	Brandon Stock and Kelly attended the March Orange County Emergency Management Organization (OCEMO) meeting in Buena Park. The primary presentation was on Cybersecurity by OCIAC staff. Additionally, Brandon and Kelly attended the county-wide Exercise Planning meeting on the same day. The County would like to make water procurement and distribution a primary logistical component to the May 21 <sup>st</sup> exercise.
	Kelly attended the Orange County Drought Task Force meeting in Santa Ana. This group is meeting quarterly to monitor how the drought is impacting the county from an emergency management perspective and to develop an emergency response plan to concepts as needed. At this time the group is making sure all county departments are aware of various efforts and monitoring impacts, such as on agriculture within the county. Kelly is working with the County Emergency Management staff to arrange for a Summary Outlook Workshop next month to discuss various response concepts related to a hot summer, such as extreme heat warnings, power outage response, a high fire season and drought concepts.
Coordination with Outside Agencies	Kelly participated in the California Office of Emergency Services (Cal OES) Southern Region Drought Conference Call. These conference calls are back to being hosted bi-weekly with the expectation that drought response concerns will start to increase due to the higher temperatures already seen this season. For example, the County of Santa Barbara is working with their County Board of Supervisors to renew their Drought Disaster Declaration, as they expect to turn potable

Description	Comments
	water pumps back on in Lake Cachuma in April. Additionally, during the call there was a discussion on methods for fire agencies to assess water reservoir levels and each reservoir's viability as air support water dip points for wildland fires.
	Brandon completed a major update to the California Operational Area Water Sector EOC Specific Position Template. Several years ago, Kelly led the initial development of this plan with the California Water/Wastewater Agency Response Network (CalWARN) State Steering Committee as a guidance document for other utilities trying to establish a water position within their county similar to how WEROC coordinates here in OC. The document was due for an update and provided a great learning opportunity for Brandon on water mutual aid systems. Kelly will be using this updated template for her presentation at a conference in Tacoma in April, as well as at AWWA ACE in June.
WEROC Emergency Operations Center (EOC) Readiness	WEROC successfully participated in the MARS radio test for March. Staff were not available for the Operational Area radio test due to a last minute conflict in schedule, however the radio was tested and is in working order.
	Kelly provided Brandon a tour of the WEROC emergency operation centers (EOC) and pest control was coordinated at the WEROC North EOC.
	Kelly provided two sessions of a new trainings for WEROC EOC staff called Position Specific Training. The 1.5 hour training reviewed all the positions within the EOC, what their responsibilities are and how each relates to other staff within the EOC, as well as to outside agencies.
	Brandon drafted a Request for Quotes for the WEROC Radio Assessment. This assessment is to understand:
	<ul><li>How all the member agency radios are programmed;</li><li>What type of equipment is being used;</li></ul>

Description	Comments
	<ul> <li>How and where their radios are installed;</li> <li>And to provide each agency with a short radio training while the contractor is on site.</li> <li>Currently, the RFQ is being reviewed by a radio technician from MET to provide input on the RFQ before it is released.</li> </ul>
	Brandon has audited previous exercise after-action reports for recommended updates in EOC equipment and materials. He has started to receive pricing, ordering and replacing needed items for the next exercise on May 21 <sup>st</sup> .
	UPDATE - Both EOC's still have significant construction onsite. The North EOC site has the IRWD Baker Raw Water Pump Station construction in process and the South EOC has a communications infrastructure construction project onsite for El Toro Water District. Both sites are still accessible and in working order, but because the North EOC is physically a smaller site, the South EOC will continue as the primary EOC at this time.

## **Status of Water Use Efficiency Projects**

## **April 2015**

Description	Lead	Status	Scheduled	Comments
	Agency	% Complete	Completion or Renewal Date	
Smart Timer Rebate Program	MWDSC	Ongoing	September 2015	For February 2015, 0 smart timers were installed in the residential and commercial sectors.  For program water savings and implementation information,
				see MWDOC Water Use Efficiency Program Savings and Implementation Report.
Rotating Nozzles Rebate Program	MWDSC	Ongoing	Ongoing	For February 2015, 0 residential and 1,455 commercial rotating nozzles were installed in Orange County.
				For program savings and implementation information, please see MWDOC Water Use Efficiency Program Savings and Implementation Report.
Water Smart Landscape Program	MWDOC	On-going	November 2015	In February 2015, a total of 12,477 meters received monthly irrigation performance reports comparing actual water use to a landscape irrigation budget customized to each meter.
				For program savings and implementation information, please see MWDOC Water Use Efficiency Program Savings and Implementation Report.
SoCal Water\$mart Residential Indoor Rebate Program	MWDSC	On-going	On-going	In February 2015, 548 high efficiency clothes washers and 2,047 high efficiency toilets were installed through this program.
				For program savings and implementation information, please see MWDOC Water Use Efficiency Program Savings and Implementation Report.

SoCal Water\$mart Commercial Rebate Program	MWDSC	On-going	On-going	In February 2015, 109 high efficiency toilets, 6 zero water urinals, and 1 cooling tower conductivity controller were installed through this program.  For program savings and implementation information, please see MWDOC Water Use Efficiency Program Savings and Implementation Report.
Industrial Process Water Use Reduction Program	MWDOC	90%	December 2015	A total of 41 Focused Surveys and 19 Comprehensive Surveys have been completed or are in progress. To date, 12 companies have signed Incentive Agreements. Updated discharger lists have been obtained, and outreach is continuing to sites with feasible water savings potential. As a result of this program, 346 AFY of water savings is being achieved.
MWDOC Conservation Meeting	MWDOC	On-going	Monthly	This month's meeting was held on March 5, 2015 and was hosted by the City of Orange. The next meeting will be on April 2, 2015 at Mesa Water District.
Metropolitan Conservation Meeting	MWDSC	On-going	Monthly	This month's meeting was held on March 19, 2015. The next meeting will be April 16, 2015 at Metropolitan.
Water Smart Hotel Program	MWDOC	85%	June 2015	MWDOC was awarded a Bureau of Reclamation grant, to be matched with Metropolitan funds, to conduct up to 30 commercial and landscape audits of hotels. Enhanced financial incentives will be provided to augment the current SoCal Water\$mart rebates.  All grant funding for this program has all been reserved, and a wait list for has been created. In the event that any of the sites with reserved funding are unable to complete their projects, wait list sites would then become eligible on a first-come, first-served basis. Staff will be requesting an extension through December 2015 to allow all hotels currently in process to complete their retrofits.

Turf Removal Program	MWDOC	On-going	Ongoing	In February 2015, 316 rebates were paid, representing 758,400 square feet of turf removed in Orange County. To date, the Turf Removal Program has removed approximately 4,281,563 square feet of turf.  For program savings and implementation information, please see MWDOC Water Use Efficiency Program Savings and Implementation Report.
California Sprinkler Adjustment Notification System – Base Irrigation Schedule Calculator	MWDOC	5%	December 2015	MWDOC was awarded an additional grant from the Bureau of Reclamation to develop the Base Irrigation Schedule Calculator in support of the California Sprinkler Adjustment Notification System (CSANS). This system will e-mail or "push" an irrigation index to assist property owners with making global irrigation scheduling adjustments. Participants will voluntarily register to receive this e-mail and can unsubscribe at any time.  Staff is now in the process of preparing a Request for Proposals for the development of the Base Irrigation Schedule Calculator. The RFP should be complete by the end of March. Proposals will be due by the end of April, and staff anticipates a Board action in April.
Public Spaces Program	MWDOC	20%	December 2015	This program targets publicly-owned landscape properties located in the South Orange County IRWM Plan area and encourages the removal of non-functional turfgrass, the upgrade of antiquated irrigation timers, and the conversion of high-precipitation-rate fixed spray irrigation to low-precipitation-rate rotating nozzles and/or drip irrigation.  To date, 10 cities, water districts, or other special districts (i.e., school districts) have applied for funding through this program, six cities have worked with MWDOC on completing their project funding calculation worksheet, and four complete project proposals have been received.

TT C. 4°C' 4°	MUDOC	170/	I 1 2017	mi' '1 '1 C '1 '2 '41 '1 1
Home Certification	MWDOC	17%	July 2015	This program provides single-family sites with indoor and
Program				outdoor audits to identify areas for water savings
				improvements and opportunities and offers rebates for the
				installation of residential water efficiency devices, including
				smart timers and high efficiency rotating nozzles.
				In February 2015, MWDOC received twelve (12) applications
				for the Home Certification Program. Seven (7) surveys were
				conducted, and survey results are pending.
Landscape Irrigation	MWDSC	Ongoing	June 2016	Through this program, Metropolitan offers, at no cost, the
Survey Program				services of a certified landscape irrigation auditor who will
Sur vey r regruin				survey and provide written recommendations for qualifying
				non-residential properties within Metropolitan's service area.
				non residential properties within Metropolitain's service area.
				To date, 127 sites in the MWDOC service area have contacted
				Metropolitan to request surveys.
Convey to Dain	MWDOC	28%	A mail 2016	This is a pilot program designed to test the efficacy of
Spray to Drip	MWDOC	28%	April 2016	
Conversion Pilot				replacing conventional spray heads in shrub beds with low-
Program				volume, low-precipitation drip technology. Through a rebate
				program format, residential sites will be encouraged to convert
				their existing spray nozzles to drip.
				To date, 89 residential applications and 26 commercial
				applications have received a Notice to Proceed. Of these, 60
				residential sites and 16 commercial sites have been completed.
CII Performance-Based	MWDOC	2%	December 2017	This program will provide enhanced rebate incentives to
Water Use Efficiency				commercial, industrial, and institutional sites and large-
Program				landscape properties (landscapes $\geq 1$ acre).
				1 F F F F F F F F F F F F F F F F F F F
				The program launched during the first Quarter of 2015.
Landscape Training and	MWDOC	Ongoing	Ongoing	The Orange County Garden Friendly (OCGF) Pilot Program
Outreach	& County			promotes the use of climate appropriate plants and water
	Stormwater			efficient irrigation practices, with the overall goals of reducing
	Stormwater			water runoff and improving outdoor water use efficiency. The

Landscape Training and Outreach (cont.)	OCGF Pilot Program is a collaborative effort of the Orange County Stormwater Program (OCSP) and the University of California Cooperative Extension (UCCE). Each partner plays
	a role in planning and implementing the Program.  The OCGF program held three events during Spring 2015 at the Home Depots in Cypress, Lake Forest, and Irvine. Three more events are scheduled to be held on April 11 <sup>th</sup> , April 25 <sup>th</sup> , and May 2 <sup>nd</sup> .

Total Water Savings All Programs				916	2,713,070	9,110	6,232,870	40,987	341,036

<sup>(1)</sup> Water Smart Landscape Program participation is based on the number of water meters receiving monthly Irrigation Performance Reports.

Page 65 of 76

Item 4d

<sup>(2)</sup> Cumulative Water Savings Program To Date totals are from a previous Water Use Efficiency Program Effort.

<sup>(3)</sup> Turf Removal Interventions are listed as square feet.

<sup>[4]</sup> Cumulative & annual water savings represents both active program savings and passive savings that continues to be realized due to plumbing code changes over time.
