

10 TIPS FOR DETECTING SNEAKY LEAKS

..... *Around Your Home*

1

WATCH FOR SPIKES

Keep an eye on your water statement. Hidden leaks are one of the most common causes of unusually high water bills!

2

INSPECT WALLS

Look around your home. Discolored or flaking paint can be an indicator that leaks are hiding behind the drywall.

3

DYE TEST THE TOILET

Place a drop of food coloring in your toilet tank. If color shows in the toilet bowl after 10 minutes, you found a leak!

4

EXAMINE THE TOILET FLAPPER

Check the rubber seal at the bottom of your toilet tank. It can get cracked or worn down with age, leading to easily missed leaks.

5

SECURE SHOWER HEADS

Regularly check shower heads for dripping or excess moisture. One drip per second can waste up to 3,000 gallons of water annually!

6

SURVEY FIXTURES AND PIPES

Frequently check under kitchen, laundry, and bathroom sinks for moisture and around tubs, toilets, and showers for puddles.

7

LISTEN FOR LEAKS

Some leaks can be heard! A soft hissing or dripping sound can indicate a hidden leak.

8

PEEK UNDER APPLIANCES

Bulky appliances can easily hide leaks. Check beneath your dishwasher, fridge, and water heater for hidden drips or pooling.

9

LOOK FOR PUDDLES

If it hasn't rained and you see water pooling outdoors, it could be due to broken sprinklers or a broken water line.

10

CHECK YOUR SPIGOTS

Ensure all outdoor faucets and hoses work properly without dripping, spraying, or excess moisture.
